

Samuel Ramirez

Front End Developer

PROFILE

A business graduate who found their calling in computer programming, and hasn't looked back since. I love to learn new technologies and push the scope of web design in my work. Web Development and UI/UX is my passion, and I continue to grow as a web developer.

EXPERIENCE

Freelance Web Developer — 2018–Present

Consulted with local businesses to visualize and rebrand their business. I developed branding needs such as flyers and business stationery as well, while also launching business websites.

- Used frameworks such as Bootstrap and React to create a streamlined page with various components.
- Designed wireframes to illustrate the direction and creative choices of the website.
- Created prototypes and mockups to get an understanding of the applications for the project.
- Integrated the design concepts into code by using HTML and CSS as the foundation of the website.
- Using several tools such as SASS to accommodate future modifications by writing proper syntax and clean code.
- Utilized programming languages like JavaScript to add more dynamic features; such as adding a menu with separate categories set by the user.
- Launched websites with SEO tools to make the website stand out and easily accessible to target audiences and local users.

EDUCATION

Hartnell College — 2019

Associate Degree in Business Administration
